# BLENDERS

Ribbon Mixer consists of horizontal U shape mixing vessel, drive system and ribbon agitator. The mixing element is combined with inner and outer double helical ribbon agitator. The outer ribbon moves materials into center direction and inner ribbon moves the materials in opposition direction to shape radially and laterally movement. Finally, the material will be discharged at center discharge valve. Ribbon Blender is an efficient and versatile blending machine for mixing of dry granules & powders homogeneously. Various materials can be mixed in ribbon mixer through a gentle way, especially in food material mixing. Furthermore, high speed chopper is also available to break some lumps during blending process.

## FEATURES

The background of the image is a faded, light-colored photograph of industrial machinery. It features various components such as hydraulic cylinders, hoses, and metal fittings. A prominent white hydraulic valve block with a 'T-2' label is visible in the upper center. To the left, there are several black hydraulic hoses connected to a manifold. In the foreground, a large, polished metal cylinder is part of the machinery. The overall scene suggests a professional industrial or manufacturing environment.
