SILOS

PULVERIZER

The most versatile machine that is used to grind almost all materials like spices, foodstuffs, chemicals, Ayurvedic herbal, minerals and other miscellaneous materials.

The grinding takes place between the high speed swinging hammers and top/side liners.

Once the particles size reduces to that of the perforated screen at the bottom, it will be discharged through the hopper.

The fineness of the material can be controlled by changing the speed of the rotor (hammer), content of serrations on liners, number of hammers and diameter of perforation on the screen.

A background image of industrial machinery, specifically a lathe or similar metalworking machine. The image is faded and serves as a backdrop for the text. It shows various mechanical components like a tool holder, a cutting tool, and a rotating workpiece.
